

FRAC

Corten Lamp

DESCRIPTION

FRAC is the table lamp made by cutting and pressing processes of sheet metal in brushed corten. The idea of designer Giuseppe D'Altilia is to "dress the light" just as a fashion designer would do. The tailcoat thought for the great occasions, is made of metal and "dress" the light metaphoricall.

The stainless steel mesh cone propagates the light beam. The cuts on the edges embellish and emphasize the tailormade component.
