

CUBICA

Corten bench

DESCRIPTION

Cubica is the corten outdoor bench with an original and captivating concept. The metal parallelepiped is fragmented into five irregularly shaped elements by means of transverse cuts. Along the openings are stretched synthetic fiber ropes which are wound on threaded bars in stainless steel with a circular cross-section. The ropes, in addition to embellishing the furniture, run longitudinally along the entire width of the seat to firmly hold the elements. The various corten finishes enhance the peculiarities of the material.

DETAILS
