

FOGLIA

Corten chair

DESCRIPTION

The Corten chair Foglia is carried out according to marked working phases of the steel sheet that is cut, bent and welded. The armchair seating foresees decorative cuts on a part of the back and on the seating top obtained through water jet technology. Such a decoration not only reduces the furniture weight but also characterizes its design by imitating the veins of a leaf, hence the name. From the same collection, the catalog offers also a corten stool Foglia.
